

## *Rediscovering Nova Scotia's Past Producing Gold Mines*

**Our mission is to advance a portfolio of highly prospective gold assets in Nova Scotia's most prolific mining district.**

Osprey Gold is focused on developing a group of past-producing gold projects, and has set its sights on mining-friendly Nova Scotia.

The flagship project Goldenville is located in the historical mining district of the same name - one of eastern Canada's most significant gold belts. Goldenville has an Inferred Resource of 2.8 mill tonnes at 3.20 g/t gold for 288,000 ounces of gold (2.8 mill tonnes at 4.96 g/t gold for 447,000 ounces of gold uncapped). Having recorded over 200,000 ounces of gold produced between 1862 and 1942, this makes it the largest historic producer in Nova Scotia and a very suitable locale for Osprey Gold to focus on rapid resource expansion.

In addition to the Goldenville project, Osprey is also exploring three other key projects, Miller Lake, Gold Lake & Lower Seal Harbour gold projects.

## **INVESTMENT HIGHLIGHTS**

- Goldenville is the largest historic gold producer in Nova Scotia, with 212,300 ounces of gold production prior to 1942
- Inferred Resource of 2.8 mill tonnes at 3.20 g/t gold for 288,000 ounces of gold (2.8 mill tonnes at 4.96 g/t gold for 447,000 ounces of gold uncapped)\*
- Structure remains open along strike and at depth
- Under-explored target areas permissive for expansion drilling
- Drilling to commence in summer of 2017

\*Mineral resources are not mineral reserves and do not have demonstrated economic viability. No mineral reserves have as yet been defined. Inferred mineral resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be considered for estimation of mineral reserves, and there is no certainty that the inferred mineral resources will be realized.
